

01 / PRODUCT OVERVIEW

Pre-Active Starter

Professional Pre-Treatment Skin Prep | 500mL

A refined beginning to professional skin treatments.

Surface Preparation • Hydrating Care • Skin Conditioning

THE TREATMENT BEGINS BEFORE THE FIRST ACTIVE.

Exceptional professional care is built on thoughtful preparation.

Dr. Esthé Pre-Active Starter brings a refined approach to the step between cleansing and treatment. This lightweight preparation solution helps sweep away residual surface impurities while surrounding the skin with moisture-supporting and conditioning ingredients.

Its water-and-alcohol base is complemented by Panthenol, Erythritol, Glycerin, Allantoin, and six forms of Hyaluronic Acid—a carefully layered composition that pairs purposeful surface preparation with attention to skin feel.

An essential consideration for professionals who approach every stage of a service with intention.

PREPARE WITH PRECISION. CONDITION WITH PURPOSE.

The skin you begin with shapes the decisions you make throughout a treatment.

After cleansing, Pre-Active Starter offers a dedicated step to refine surface preparation before moving into your selected protocol. The fluid formula applies easily with a cotton pad, making it a practical addition to a considered, professional workflow.

From customized facials to compatible peel protocols, it gives skin preparation its own place in the service—supported by a formula that goes beyond a basic water-and-alcohol composition.

02 / THE PROFESSIONAL ADVANTAGE

A place in your backbar.

Purposeful preparation. Considered conditioning. Professional convenience.

PURPOSEFUL SURFACE CLEANSING

Helps lift residual surface impurities after cleansing, preparing the skin surface for the next appropriate step.

A MOISTURE-CONSCIOUS FORMULA

Panthenol, Erythritol, Glycerin, and supporting humectants bring hydration-focused care to the preparation stage.

LAYERED SKIN CONDITIONING

Allantoin, Hyaluronic Acid derivatives, botanical extracts, and fermented ingredients complement the formula's conditioning profile.

AN ELEGANT, FLUID APPLICATION

A lightweight liquid format allows controlled application with a cotton pad and fits naturally into professional treatment preparation.

PROFESSIONAL-SIZE CONVENIENCE

The generous 500mL format is designed to take its place among your treatment-room essentials.

THE INGREDIENT ARCHITECTURE

Pre-Active Starter combines a fluid solvent base with a complementary moisture-supporting system. Alcohol contributes to its lightweight application, while humectants help attract and retain moisture at the skin's surface.

This balance defines the product's role: an additional surface-cleansing and conditioning step before compatible treatments.

03 / KEY INGREDIENTS

Preparation meets care.

A layered composition with a clear professional purpose.

SURFACE PREPARATION / WATER + ALCOHOL

The foundation of the formula is a water-and-alcohol system that delivers a lightweight, readily spreadable application. Alcohol serves as a solvent and contributes to the formula's quick-drying character. Used with a cotton pad, the solution helps sweep away residual surface impurities after cleansing.

This is the preparation layer: straightforward, purposeful, and easy to incorporate into a compatible professional protocol.

MOISTURE & COMFORT / PANTHENOL + ERYTHRITOL + GLYCERIN + ALLANTOIN

A professional preparation step deserves attention to skin conditioning. Panthenol, also known as provitamin B5, helps support a soft, moisturized skin feel. Erythritol and Glycerin contribute humectant care, attracting water and supporting moisture retention at the skin's surface.

Allantoin complements this system with additional skin conditioning. Together, these ingredients give the formula a moisture-focused dimension that supports its identity as both a preparation and conditioning solution.

BOTANICAL & FERMENTED CONDITIONING

Lavender Flower Water forms part of the aqueous base, accompanied by a selection of botanical and fermented ingredients. Portulaca Oleracea, Scutellaria Baicalensis Root, Chamaecyparis Obtusa Leaf, and other botanical extracts complement the conditioning profile, while Lactobacillus/Soybean Ferment Extract adds a fermented component.

Tangerine Extract, Pearl Extract, and Spirulina Platensis Extract further round out the ingredient composition. Rosemary Leaf Oil contributes an aromatic element. Each has a supporting place within the complete formula.

04 / MULTI-FORM HYDRATION

Six forms. One considered system.

Complementary Hyaluronic Acid ingredients for surface moisture support.

Sodium Hyaluronate

A humectant that binds water and supports surface hydration.

Sodium Hyaluronate Crosspolymer

A crosslinked form that contributes to surface moisture retention.

Hydrolyzed Hyaluronic Acid

A hydrolyzed form that complements the formula's moisturizing system.

Hydroxypropyltrimonium Hyaluronate

A modified derivative used for skin-surface conditioning.

Hyaluronic Acid

A water-binding ingredient that supports a hydrated skin feel.

Sodium Acetylated Hyaluronate

An acetylated derivative that contributes to moisture retention and conditioning.

This multi-form system adds a considered layer of humectant care to the preparation experience.

05 / PROFESSIONAL APPLICATIONS

Prepare for your protocol.

A defined role between cleansing and compatible professional care.

CUSTOMIZED FACIALS / A DEDICATED TRANSITION

Incorporate after cleansing when an additional surface-preparation step suits the client's skin and your selected facial protocol. Its lightweight application makes it easy to establish a clear sequence: cleanse, prepare, then proceed with the appropriate treatment.

PROFESSIONAL MASKS & TARGETED TOPICAL CARE

Use within compatible mask and topical treatment protocols to complete surface preparation before application. A purposeful option for professionals who want each step—from cleansing to finishing care—to have a defined role.

CHEMICAL PEEL PROTOCOLS

Integrate into peel services that permit this type of preparation solution. Select according to the peel system's instructions, including any requirements for degreasing or removal of conditioning residue.

ADVANCED AESTHETIC SERVICES

For microneedling, laser, IPL, dermaplaning, microdermabrasion, and other device-assisted services, preparation should be planned around the specific procedure.

Where expressly permitted, Pre-Active Starter may fit into the preliminary cleansing stage on intact skin. Complete the procedure's required residue removal, antiseptic preparation, drying, and treatment-medium application before proceeding.

Its role is cosmetic surface preparation—not needling glide, skin disinfection, or device coupling.

06 / COMPLETE INGREDIENT EDUCATION

The formula, explained.

The base, moisture system and ingredients that support application.

Every professional formula includes ingredients that shape performance, application, preservation, and skin feel. This guide explains the supporting architecture behind Pre-Active Starter. Functions describe general cosmetic roles; contribution depends on concentration and the complete formulation.

THE BASE & APPLICATION SYSTEM**Water**

Provides the primary aqueous medium for the formula.

Alcohol

Functions as a solvent and contributes to a lightweight, quick-drying application.

Lavandula Angustifolia (Lavender) Flower Water

Introduces a botanical water component into the base.

1,2-Hexanediol

Provides multifunctional solvent and moisture-supporting properties and can assist the preservation system.

Butylene Glycol

Combines solvent and humectant functions to support formulation and application.

Propanediol

A multifunctional solvent and humectant that complements the liquid base.

Polyglyceryl-10 Laurate

Helps disperse and solubilize formula components.

THE MOISTURE & CONDITIONING SYSTEM**Glycerin**

A foundational humectant that attracts water and supports surface moisture retention.

Panthenol

Provitamin B5; provides humectant and skin-conditioning care.

Erythritol

A sugar-alcohol humectant that complements the moisturizing system.

07 / COMPLETE INGREDIENT EDUCATION

Conditioning in detail.

Moisture-supporting ingredients and complementary botanical components.

Allantoin

Adds skin-conditioning support.

Hydrolyzed Glycosaminoglycans

Complement the formula's moisture-supporting and conditioning profile.

Sodium Hyaluronate

Supports surface hydration through water-binding properties.

Sodium Hyaluronate Crosspolymer

Contributes crosslinked humectant support.

Hydrolyzed Hyaluronic Acid

Complements the formula's hydration-focused composition.

Hydroxypropyltrimonium Hyaluronate

Provides modified Hyaluronic Acid conditioning.

Hyaluronic Acid

Contributes water-binding humectant care.

Sodium Acetylated Hyaluronate

Adds a further form of moisture-retaining skin conditioning.

THE BOTANICAL & SPECIALTY COMPONENTS

Citrus Tangerina (Tangerine) Extract

A botanical skin-conditioning ingredient.

Rosmarinus Officinalis (Rosemary) Leaf Oil

Contributes fragrance and an aromatic dimension.

Enantia Chlorantha Bark Extract

A botanical component used in skin-conditioning formulations.

08 / COMPLETE INGREDIENT EDUCATION

Botanical & specialty care.

Complementary components within the complete formulation.

Pearl Extract

Complements the cosmetic conditioning profile.

Chamaecyparis Obtusa Leaf Extract

Adds botanical skin conditioning.

Scutellaria Baicalensis Root Extract

A botanical ingredient used in conditioning and antioxidant formulations.

Salix Alba (Willow) Bark Extract

Contributes botanical skin conditioning.

Cinnamomum Cassia Bark Extract

A complementary botanical ingredient.

Origanum Vulgare Leaf Extract

Forms part of the botanical conditioning composition.

Portulaca Oleracea Extract

A botanical ingredient frequently selected for comfort-focused skincare.

Lactobacillus/Soybean Ferment Extract

A fermented skin-conditioning ingredient.

Oleanolic Acid

A complementary component used in skin-conditioning formulations.

Bromelain

A pineapple-derived proteolytic enzyme included in the ingredient composition.

Succinic Acid

An organic acid included as a complementary formulation component.

Spirulina Platensis Extract

A microalgae-derived skin-conditioning ingredient.

09 / FORMULA INTEGRITY & APPLICATION

Complete the preparation.

Formulation support, professional application and selection guidance.

FORMULA INTEGRITY & SUPPORT

Disodium EDTA

Binds metal ions to help support formula stability.

Benzyl Glycol

Functions as a solvent within the formulation system.

Caprylyl Glycol

Provides humectant and conditioning properties while supporting preservation.

Ethylhexylglycerin

A multifunctional conditioning ingredient that complements the preservation system.

HOW TO USE

After cleansing, gently pat the skin dry. Apply Pre-Active Starter to a cotton pad and lightly sweep over intact skin, avoiding the eyes, mucous membranes, and irritated areas.

Proceed with the selected treatment according to its preparation requirements, including any additional removal, antiseptic, or drying steps.

PROFESSIONAL GUIDANCE

Select according to skin condition and tolerance to alcohol, aromatic oils, and botanical ingredients. For advanced procedures, confirm compatibility with the specific manufacturer's protocol. The alcohol-containing formula requires particular attention to laser and IPL fire-safety requirements.

Do not use as an antiseptic, microneedling glide, or conductive medium. Avoid broken or freshly resurfaced skin. For external use. Discontinue use if irritation occurs.
